SCRAPER Tool – Research Summary by Hammad Durrani

TOOL NAME: APIFY

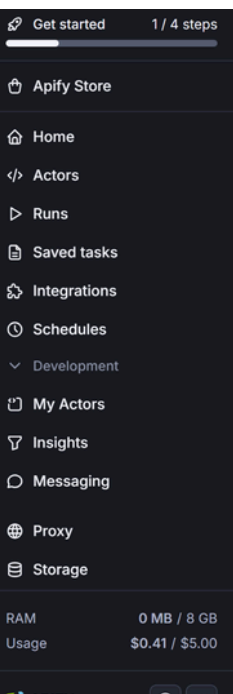

WEB-URL TOOL: <https://console.apify.com/>

Overview:

APIFY Google Maps scraper is a scarper tool that extracts data from Maps, ideal for discovering local business contacts or others. Whether you're targeting specific industries or broad geographic areas, it streamlines the process with speed and precision.

Key Features

- Scrapes Google Maps data for contact info and business details+ALL DETAILS
- Local business targeting made efficient
- Fast and simple interface—minimal effort required
- Multiple lead files allowed to bypass free version limits

Extract data from thousands of Google Maps locations and businesses, including reviews, reviewer details, images, contact info, opening hours, location, prices & more. Export scraped data, run the scraper via API, schedule and monitor runs, or integrate with other tools.

[Manual](#) [JSON](#)

Our base charge for Google Maps is just \$4 per 1,000 places. See detailed prices [here](#). To extract place data or contact details from Google Places, simply Enter [Search term](#), add [Location](#), and [Number of places](#) to extract. The section [Search filters & categories](#) contains various extra features, filters, and sorting options. These are an additional cost, and the (\$) sign indicates filters or options that incur an incremental cost to the run. You also have the option to customize using various filters and add additional data like reviews or images, which are charged at an additional cost and are marked by the (\$) sign below.

You can find more details about the pricing [here](#).

Sections with asterisk* are just alternative ways to start the input ([Geolocation parameters](#), [Polygons](#), [URLs](#)). They can be combined with any of the features and sorting options from the [Filters](#) section

Tool Benefits & Method Overview: Google Maps Scraper (Apify)

What It Does

Effortlessly extracts data from Google Maps businesses—such as reviews, contact info, images, and location details—for marketing, analysis, or outreach.

How to Use It (Simple Steps)

1. **Enter Target Keyword:** Example: restaurant, gym, car repair
2. **Set Location:** Example: Pakistan, New York, or any city/country
3. **Specify Number of Places to Extract:** Decide how many results you want, e.g., 500 places
4. **(Optional) Apply Filters:** Add review data, images, or sort results (extra cost if marked with \$)

Pricing

- \$ per 1,000 places scraped
- Add-ons like reviews or advanced filters come at additional cost

Why Apify Is One of the Best Tools (Complete Overview)

Apify is a cloud-based web scraping and automation platform that lets you extract data from websites easily, using ready-made scrapers or your own custom code — no servers or setups needed.

Apify is a cloud-based web scraping and automation platform that lets you extract data from websites easily, using ready-made scrapers or your own custom code — no servers or setups needed.

Key Reasons to Use Apify

1. Ready-Made Actors (Scraping Templates)

- Actors = prebuilt scrapers (like for Google Maps, Amazon, YellowPages, etc.)**
- You don't need to write code.**
- Just enter what you're searching for (like “restaurants in Lahore”), and it scrapes everything.**

2. Built-In Scheduling & Cloud Storage

- Schedule scrapes daily, hourly, weekly.**
- No need to run anything locally.**
- Data is stored in the cloud and ready to export anytime.**

Multiple Export Formats (Perfect for Excel & Analysis)

- **You can export your data to:**
 - **CSV**
 - **Excel**
 - **JSON**
 - **HTML Table**
 - **XML**
- **Perfect for analysis, email campaigns, lead generation, or data research.**

Free Tier Available

- **Free plan gives access to basic scraping power.**
- **Great for small to medium projects (like collecting restaurant emails).**
- **Upgrade only if you need very large or frequent scraping.**

Google Maps Scraper – Top Feature

- **Their Google Maps Scraper is one of the best:**
 - **Collect restaurant names, emails, phone numbers,**
 - **websites, ratings, and addresses.**
 - **Works across any country (Pakistan included).**
 - **One of the best tools for local business data collection.**

Conclusion: Why You Should Use Apify

Apify is one of the powerful, flexible, and user-friendly web scraping tool.

It combines ease of use (no code) with advanced capabilities (JavaScript automation, headless scraping), making it ideal for users like you who want to collect bulk business data — like restaurant emails in Pakistan — legally, cleanly, and fast.

Whether you're a beginner or a developer, Apify gives you everything you need in one tool.
